1. This action is in response to the amendment that was received on March 4, 2005. Claims 4-15 are pending. Claims 1-3 have been canceled. Claims 4-15 have been added.

2. The following is an examiner's statement of reasons for allowance:

The cited prior art describe systems that change the voltage and frequency of components in data processing systems. Gary et al (2004/0025069) describe that voltage and clock domains are known in Table 1 at the top of page 2. Gary et al does not describe the domains in a microprocessor and does not describe dynamically controlling the clock frequency and voltage in each domain independently of the clock frequencies and voltages in each of the other domains. Tam et al describe dynamically varying clock frequency to adapt to changes in Vcc. Tam et al does not describe a plurality of domains in a microprocessor or using their system in a microprocessor having a plurality of domains.

The claimed invention is allowable over the art of record because the art of record does not teach or suggest a method or apparatus for dynamically controlling the clock frequency and voltage in a microprocessor having a plurality of domains comprising a microprocessor having a plurality of domains, each domain having a clock for separately generating a clock signal at a frequency for that domain, the frequency being dynamically changeable independent of the clock frequencies in each of the other domains and each domain having a voltage input for receiving a voltage that is dynamically changeable independent

of the voltage applied to each of the other domains as claimed in independent claims 4 and 11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
